Job Experiences

05.2023 – 06.2024: AUNA Salud

Tech Lead 05.2023 – 12.2023

Engineer Manager 01.2024 – 06.2024

This company represented a great challenge, as I was hired along with other technical leaders to structure the engineering department. Since this company belongs to the healthcare sector and had only worked with providers up to that point, its system was becoming overly complex. After several months and a lot of effort, we managed to establish the teams and workflows.

By the end of the year, the company suggested promoting me to the position of Engineering Manager of the "Agendamiento Multisede" team, a product intended for the patient appointment booking system.

05.2022 – 05.2023: Karvi

Frontend Tech Lead

This company is an interesting project that combines important pieces: a big public site with a lot of publications, SEO optimizations, large traffic, and an intranet where the dealers create publications that will be published on Karvi and other portals. For this position, I was able to apply a lot of knowledge acquired during my career, making me stronger as a developer and lead of a team, with whom we achieved outstanding results. I am very proud of our work.

11.2020 – 03.2022: Yappa

Full Stack software engineer

This startup presented me with a lot of technical challenges. After many years, I had the opportunity to work again on projects related to audio and video, which are very enjoyable areas for me, where I was able to take advantage of my knowledge in multimedia (audio recording, video compression, etc.). Here, I was able to take on backend tasks again after many years. It was a good experience to feel like a Full Stack developer.

02.2020 – 10.2020: Medallia

Front end Developer

In this company, I learned how to organize the job between a lot of teams and objectives. However, the technical challenges were not attractive to me, so I decided to seek new opportunities after a few months.

10.2016 – 01.2020: Elementum

Full stack software engineer II

This is a startup company located in Mountain View, but large for the Argentine market. So I had to learn many formal procedures in a short time. For me, it was an important period to enhance my professional profile and gave me the opportunity to expand other skills more related to architecture instead of coding. In this job, I was promoted to Software Engineer level 2. At that point, I felt a chapter in my career had closed. After careful thought, I decided to pursue new goals.

09.2011 – 09.2016: Truelogic

Front end Tech Lead

I started working on fast web projects using common PHP frameworks like Drupal or WordPress. I worked on several sites dedicated to the Emmy Awards using those technologies. However, in 2012, I moved to the frontend team to start a new web application for "Turn" a company specialized in ad distribution. We migrated the old frontend app to the most recent technologies of the time: Angular and Bootstrap. After two years working with that customer, I was promoted to Tech Lead. During my last year at the company, I was assigned a new customer: Elementum, software related to supply chain management. After eight months, the company decided to establish a big team in Argentina, so I accepted the job offer.

05.2010 – 08.2011: Indietech (Freelance)

Front end developer

Indietech is a small-medium company dedicated to commercial sites. I was contacted to develop new interactive sites using JavaScript/jQuery with the objective of deprecating the old Flash sites of their customers. I was also dedicated to making responsive HTML markups for several projects. I decided to leave this job to work full time in my new job.

04.2008 – 08.2011: Soluciones Uno

Production Lead

This was my first formal job. Soluciones Uno was an Argentine small-medium enterprise that provided an integral e-commerce service to different customers. Basically, it was a service that started from the corporate design and ended with the e-commerce website development. During the first period, I was integrated into the design team, but a couple of months later, I was promoted to the development team, first to make HTML markups, and later for PHP development and DB design based on MySQL. During my last year, I was leading a small development team of six people. I left the job to seek a bigger company.

Other Experiences

3D Printing

During 2019, I started in this field and I am learning more every day. At the moment, I have built three printers, but I am sure that I have a lot more to learn.

Photography

I am an amateur photographer. I dedicate much of my free time to perfecting my knowledge about photography. I have taken some courses and spent a lot of money on equipment!

Design, audio and video

While my primary profession is something else, I developed a passion for web development during my final years of college. I always strive to apply my design knowledge, particularly in areas like HTML semantics and complex topics such as video compression.
